

Angler Map with transects, locations and instructions: We will give a brief tutorial for species ID and handling procedure

- 1) On the datasheet please indicate which transect you are in (i.e. 1,2, or 3). Also, indicate left or right on the bank location. (Using boater terminology where River left refers to the left side of the river looking downstream).
- 2) Fill in your full name, date, and indicate in the equipment if you're using flies, gear, or both.
- 3) As each individual fish is captured, collect and fill in all the information except the Gastric Lavage ID. Total length is from the tip of the snout to the end of the edge of the longest lobe on the caudal fin.
- 4) Check for already clipped fish. Give the fish a small fin clip for a mark. Fin clips will differ by day. Nov 12<sup>th</sup>: upper caudal, Nov 13<sup>th</sup> lower caudal, and Nov 14<sup>th</sup> will be pelvic.
- 5) Put the fish in a live well next to your fishing location and radio the personnel with the gastric lavage equipment.
- 6) Gastric Lavage person will check for PIT tag on any trout species (Rainbow, Cutthroat, Bull Trout).

**\*Please write as legible as possible to avoid transcription error**

**\*We will be meeting at the Biomark bunkhouse (4 Bailey Drive, Salmon ID) at 7 am every day. Otherwise all operations will mobilize at the boat ramp in the deadwater stretch and folks can meet us out there.**
